

Creatinine coarsening with fixed predictions

MOVER 2022 observed subset (n = 2,033)

Same patients, original predictors and fitted predictions; only outcome labels change.

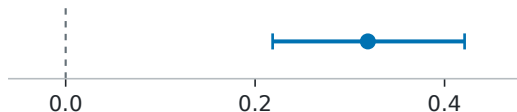

A Paired label changes

B Paired metric differences

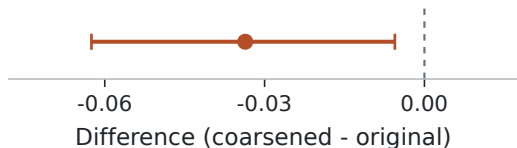

O/E

Original 1.073 | Coarsened 1.392
+0.319 (95% CI 0.218 to 0.421)

AUROC

Original 0.657 | Coarsened 0.623
-0.034 (95% CI -0.062 to -0.006)

Observed-subset estimates, not full-population AIPW/IPW estimates.

95% CIs: 1,000 paired patient bootstraps, no refitting. Label changes do not establish clinical error.
